

*“The Cardboard Box Pre-Shredder installed on our existing blade compactor is amazing, not only has it reduced our cleaning staff labour costs, the capacity has almost doubled and we don't have to get it collected as often as before”*

**Cardboard Box Pre-Shredder**

## What We Do

PAKMOR waste equipment is a specialist equipment provider manufacturing waste equipment for all types of waste & recycling. In addition PAKMOR offers national service and breakdown to back up its own equipment and/or other manufacturers equipment throughout the marketplace.

- Fully Designed & Manufactured in Australia.
- Over 40 years experience and expertise in the waste industry.
- 24/7 Service / Breakdown
- Custom made equipment solutions to suit your application

## Cardboard Pre-Shredder

The Cardboard pre-shredder is a newly developed piece of equipment designed for both new compactors or as a bolt-on addition to your existing Stationary or Integrated Auger and Blade style compactors. Ideally suited for those applications where the likelihood of cardboard bridging or jamming is identified as a potential problem due to the nature of the product whether it be very large

cardboard boxes or large flat sheets of heavy duty cardboard. The pre-shredder is specifically designed to break-down the cardboard shredding it into small pieces totally removing the possibility of bridging. In addition when doing so it also creates greater density and therefore greater payloads per bin. Increasing volume by up 70-80%.

Specifications as follows:-

**Model :** BPS.33-50

**Main Frame :** 1700mm x 1500mm x 350mm

**Drive Shafts :** 2025mm x 100mm x 10 HT TUBE

**Torque Arms :** 20mm PLATE

**Gearbox :** Bevel Gears

**Cutters (Straight) :** 7-off 12mm THK. HT STEEL PLATE

**Cutters (Angled) :** 6-off 12mm THK. HT STEEL PLATE

**Electrical :** 3 Phase 4 pole 415 Volt 50hz

**Electric Motors :** 3kw 4 pole 415 Volt 50hz

**Unit Weight :** 825 kgs

## SMS TECHNOLOGY

PAKMOR is always leading the way in developing and bringing new products and offerings to compliment its range of equipment . The introduction of SMS Technology is a perfect example, we have more than 150 compactors currently in service throughout Australia equipped with SMS Technology. The system was initially developed over 4 years ago now and has a proven track record in reporting 3/4 & bin full status to customers and end users, it is also used to determine machine faults & breakdowns with the ability to send alerts to nominated recipients when a machine is not working or has a tripped MCB for example. It is also used by PAKMOR to make remote changes and adjustments that may be required to the settings in the PLC of the compactor, altering cycle times, 3/4 full maximum and minimum settings and other adjustments that normally require a technician to attend the compactor on site to alter.

For further details and information please don't hesitate to contact us.
